1.0 INTRODUCTION TO THE 2024 REPORT

This document is a continuation of the biennial reporting that commenced in 2012 as part of legislative changes attributable to Senate Bill 3. Applicable historic preservation laws and the Department of Natural Resources and Conservation's (DNRC) procedures developed to comply with these statutory requirements are fully outlined in the 2012 report and are not reiterated here. The 2024 report updates the total number of cultural and paleontologic resources formally recorded to date on DNRC administered state land, with specific focus on those cultural resources evaluated and determined to be "Heritage Properties". The reader is referred to DNRC's 2012 report if additional background or context is required.

2.0 CULTURAL AND PALEONTOLOGIC RESOURCES ADMINISTERED BY DNRC

The DNRC administers approximately 5.2 million acres of state land. The vast majority is School Trust Land. A very small percentage is state land administered by the State Water Projects Bureau of DNRC's Water Resources Division. Water Projects Bureau property is generally restricted to 22 dams and reservoirs.

With limited exceptions, methodic inventory of School Trust Land did not commence until 1984. To date 620,282 acres (12%) have been inventoried for cultural and paleontologic resources. Approximately 11,047 acres were inventoried from 2022 through 2023. Of that two-year total, DNRC staff inventoried approximately 10,710 acres. The remainder was inspected by federal agency archaeologists (NRCS, USFWS, and BLM) or consulting cultural resource professionals primarily hired by the Montana Department of Transportation, utility companies, oil and gas development companies, or open cut mine/gravel pit interests.

Considering only 12% of DNRC administered land has been inventoried, approximately 3,533 cultural resources and 72 paleontologic resource locales have been formally recorded. That is an increase of 148 cultural resources and 2 paleontologic resources since the 2020 report was prepared for the Historic Preservation Review Board. Two hundred sixty-seven cultural resources on (or partially on) DNRC administered land, and dams/reservoirs owned by DNRC's State Water Projects Bureau (some of which are on federal or private land) have been evaluated and determined to meet the criteria of a Heritage Property (Tables 1 and 2). Three of those are National Historic Landmarks, and 24 are listed in the National Register of Historic Places. Evaluated Heritage Properties have increased by 50 over the past two years.

It should also be noted that five paleontologic sites meet the criteria of "Paleontological Remains" under the State Antiquities Act. They are not Heritage Properties but are mentioned here as a point of interest. The DNRC has an agreement with the Museum of the Rockies to provide technical assistance and reposit excavated fossils that meet the criteria of "Paleontological Remains".

Fifty-one presently documented Heritage Properties are largely or wholly privately owned even though they are at least partially situated on state land (Table 1). These consist of 35 water diversion/distribution systems, one municipal water system, one historic road, the Great

Northern Railroad's Fisher River Bridge, one petroleum pipeline, and four operational railroads with 35 distinct site numbers. Similarly, 37 Heritage Properties are at least partly owned, leased, or managed by another county, state, or federal agency. In these instances, the DNRC may have restricted or no legal jurisdiction for resource management. At present, it can be concluded that DNRC has administrative authority over 185 Heritage Properties (Table 1).

By way of comparison, approximately 2,844 formally recorded cultural resources have not been evaluated so it is unknown if they meet the criteria of a Heritage Property. Of those unevaluated cultural resources, 2,361 are archaeological properties presumed to be associated with past Native American occupants of the region. They consist of 28 toolstone sources, 27 animal kill sites (primarily bison), five plant or animal processing sites, four probable or definite human burials; 30 campsites with buried components and/or hearth features; 1,497 sites that contain tipi ring-size stone circles, individual cairns, alignments of cairns, or a combination of these surface stone features; one conical timbered lodge; one cribbed log structure; 22 petroglyph sites; 9 pictograph sites; 11 fortification, vision quest, or raptor trapping sites; 612 lithic scatters; three Medicine Wheels/ceremonial structures; seven rock shelters or caves; five prehistoric trails; and 10 scarred/cambium peeled trees.

Additionally, 483 of the unevaluated resources are historic in age (post A.D. 1805) and reflect Euro-American settlement and development of the region. They consist of 136 sites associated with historic agriculture/stock raising/homesteading/settlement; one historic cairn/boundary marker; one historic campsite; one historic CCC camp; 12 historic energy/industrial development sites; 10 historic schools/education (or former school localities); 12 historic buildings/residences; one site associated with historic exploration; three historic fire lookouts; 5 historic forts/military sites; 15 historic coal mines; 10 historic hard rock mines/districts; 17 placer mines; two historic quarries; six historic burials; one historic post office; 18 sites associated with historic timber harvesting; 24 historic trash dumps/debris scatters; 45 vehicular, railroad, or foot bridges; 77 historic irrigation systems; 7 historic petroglyph sites; 77 historic roadways, trails, or railroad segments; and two railroad structures.

A discrepancy can be seen when comparing the number of DNRC cultural resources in past reports with the 2024 report. This is attributed to the manner in which data was sorted in the previous Trust Land Management System (TLMS 1.0). It was discovered in 2022 as the TLMS 2.0 data management system development commenced, that a cultural resource with a Smithsonian Trinomial that occurred in multiple legal locations was counted multiple times instead of just once. Additionally, cultural and paleontologic resources on land that has left state ownership were still counted in the old system (TLMS 1.0). There are likely a few inconsistencies that DNRC will work through over the next biennium as well but we believe the site types and numbers presented in this report are sufficiently accurate.

3.0 HERITAGE PROPERTY IDENTIFICATION AND MANAGEMENT EFFORTS

Because of the large number of Heritage Properties on DNRC administered state land, and the limited resources available to visit each property, the DNRC proposed in 2012 to inspect and report on all of its Heritage Properties over a 10 year period. Newly evaluated Heritage Properties are added to the inventory list as they are documented. The quantity of Heritage Properties on DNRC administered land will continue to increase with each passing year.

To date, all 267 Heritage Properties have been inspected and reported by the DNRC or another state agency (Table 1). The current conditions of these Heritage Properties were assessed, and Heritage Property forms were completed and submitted to the State Historic Preservation Officer. Excluding staff salaries, fuel, volunteer time, travel cost donations, and some out-of-pocket analysis expenses, the DNRC has invested approximately \$263,000 to preserve the historic qualities or archaeological data contained in some of its Heritage Properties.

Of the 176 Heritage Property forms completed by DNRC, 79 are for prehistoric archaeological sites, and 190 are for historic age sites (reference Table 2). Figures 1-8 provide visual representations of the current condition of Heritage Properties on DNRC administered state land with a #4 priority rank. This is the highest priority ranking assigned to any of its Heritage Properties.

Following direction and recommendations provided by the SHPO and the Historic Preservation Review Board since 2012, only five of the DNRC administered Heritage Properties (Table 3) are ranked higher than a #5 for immediate preservation concerns. These five resources (24BH1591, 24BH2349, 24FH1583, 24HL101, and 24PE231) are assigned a #4 in priority because they need to be continually monitored, and potential adverse effects (or additional adverse effects) need to be mitigated or stopped before they occur. As such, DNRC management should plan for long-term maintenance, stabilization, and protection of these five Heritage Properties. All other DNRC administered Heritage Properties are believed to be in stable environments and are currently in no danger of deterioration or destruction. Therefore, they are given a rank of #5 and are not given further consideration at this time. A summary of the five Heritage Properties assigned a #4 in rank follows:

24BH1591 consists of a lithic scatter presumably associated with past Native American occupants of the region. It is within the proposed expansion boundaries of the Spring Creek Coal Mine. It is currently in a stable environment and shows no signs of vandalism or natural erosion. It is uncertain why, or by whom, the site was determined eligible for National Register listing. It is given a # 4 in rank just to alert DNRC management to the need for adequate mitigation before it is destroyed with future mine expansion (none currently proposed).

24BH2349 is the Lee Homestead. The site was among the earliest of homesteads established in the Decker area of Montana. Today it is located at the base (downstream side) of the Tongue River Dam. The homestead buildings are abandoned and continue to deteriorate from neglect. Public access to the site is restricted so vandalism is not an issue. Funding is needed to make repairs and stabilize the existing structures in the site for long-term management.

24FH1583 is the most spatially extensive petroglyph site identified in western Montana to date. It is not only one of three documented petroglyph sites in all of NW Montana, it is only one of six in Montana where petroglyphs are pecked into a horizontal plane instead of a vertical face. It is also traversed by the route of the Historic Tobacco Plains Trail. This association strongly suggests ancestral Kootenai affiliation.

The site is difficult to protect because while it is on School Trust Land, the route of the historic Tobacco Plains Trail subsequently became the route of the Fort Steele Road and the established public road predates statehood. Today the road is a county road. Although the road is narrow, rough, poorly maintained and suited for high-clearance vehicles or ATVs, the DNRC has no jurisdiction over road. Additionally, the Burlington Northern Railroad R/W extends into the county road R/W. Because of topographic restrictions there is no way of moving either the railroad (immediately below the site), or the county road which crosses over a portion of the site. The location is a favorite viewing spot for local residents and partygoers although most who recreate at this locality are unaware of the petroglyphs. The features are camouflaged because of their heavily weathered state and many glyphs are fully concealed because they are buried under a thin layer of mossy-sod. Fires are occasionally built in one location upon the rock outcrop and has resulted in heat spalling of a limited, but unknown number of glyphs. Occasionally someone will spray paint or scratch his into the rock outcrop, but this is unlikely an attempt to deface or add-to the petroglyph site. Again, very few passersby recognize that petroglyphs are part of the bedrock surface.

Olney residents, David and Andrea Vissotzky, brought the site to DNRC's attention and have been proactive in helping document the site, monitor it for vandalism, and remove fire rings when they are established. Additionally, Meghan Mulholland of the Flathead National Forest has volunteered to monitor the site and has also removed recent spray paint and unauthorized fire rings.

In June, 2023, DNRC staff and a group of rock art experts convened at 24FH1583 to begin documenting the glyphs comprising the site. More than 1000 pecked images were documented in detail during the 10 day stint. The total number of glyphs represented at this extensive and one-of-a-kind precontact site in western Montana can only be estimated as several are buried beneath a thin sod layer. The number of images recorded in 2023 probably represents half of what is present. The data is slowly being processed, but the site has demonstrated to contain more atlatl imagery than documented at any other Montana rock art site, and basally corner-notched projectile points on atlatl darts (Elko Corner-Notched style) suggesting a construction date of around 2000-2500 radiocarbon years before present. The absence of bows/arrows, horses, or horse hoofprints strongly suggests imagery that predates ca. 1000 RCYBP. There is a great deal of additional information as well but it will not be made public until a series of articles are published.

24HL101 is the Wahkpa Chu'gn multi-component bison kill and processing site at the south margin of the Milk River at Havre, MT. The kill was used by Precontact Native American occupants of the region assigned to the chronologically successive Besant, Avonlea, and Old Womens archaeological cultures (ca. 2000-500 radiocarbon years before present). A portion of the site is on DNRC administered land but the county has an easement to operate the site for

tourism and educational purposes. John and Anna Brumley operated and maintained the site, pro bono, until 2018. Funds to operate and maintain the site have been derived exclusively through grants and private donations. It is presently unknown if Hill County or the City of Havre will continue operating and maintaining the site as a tourist attraction.

The display houses covering open excavation units will fall into disrepair if not annually maintained. Similarly, gravity and spring runoff will slowly erode the walls of the open excavation units covered by the display houses. The site is given a #4 in rank to alert DNRC of the necessity to monitor and maintain the interpretive integrity of this exceptional educational resource. The DNRC staff archaeologist volunteers one weekend of his time and resources to stabilize and clean the display houses at the site. Additionally, local volunteers Kelly and Judy Jones are managing up-keep, landscaping, cleaning the display houses, and guided tours.

24PE0231 is the Powder River Supply Depot. The site has been subjected to uncontrolled artifact collecting by the public in years past. The site has been well researched, partially professionally excavated, and thoroughly documented by Gerald Clark (see *Supplying Custer: The Powder River Supply Depot, 1876*. University of Utah Press, 2015). The BLM Miles City Office owns a portion of the site and infrequently monitors it for vandalism. Similarly, DNRC's Miles City Area Office staff infrequently visit the site to also monitor for vandalism or natural disturbances. In the past four years no evidence of artifact hunting or natural erosion has been identified. Signage at the site informs the public that artifact collecting is prohibited.

Table 1: Heritage Properties Currently Identified on DNRC Administered State Land (end of year 2021).

County	Site Number	Site Type or Name	Status	Administrative Authority
Beaverhead	24BE0178	Gilmore and Pacific Railroad	HP	DNRC-TLMD (abandoned alignments on State School Trust Land only)

HP = Heritage Property; NHI = National Historic Landmark; NRI = National Register Listed

Table 2: Summary by Count and Type of DNRC administered Heritage Properties and non-DNRC Heritage Properties on State School Trust Land (for year end 2023).

Count	Prehistoric Site Type or Name
1	Ambush sites/hunting blinds
5	Bison kills
29	Lithic scatters (includes sites with buried components)
8	Cairns/Cairn alignments
2	Medicine wheels
3	Prehistoric trails
2	Rock art
24	Stone circles
5*	Tool stone sources (bedrock and surface quarries/collection sites)
2	Vision quest structures/fortification structures/raptor traps
79	
Count	Historic Site Type or Name
2	Battlefields
3	Landmarks
1	Airway/airfield/aviation
1	Fort Peck barge
60	Ditches/dams/reservoirs/water conservation/irrigation systems
3	Forts/Military sites or districts
3	Havre-Rainbow Transmission Line (abandoned)
1	Toston Hydroelectric Dam
2	Historic oil/gas pipelines and oil/gas fields
5	Historic buildings/Building complexes/Administrative buildings
6	Homesteads
1	Judith Landing Historic District
4	Mines/Placer sites/Mining districts
1	Historic Petroglyphs (Kid Curry inscription)
55	Railroads/Railroad features
10	Historic bridges or culverts (railroad/vehicular/pedestrian)
29	Highways/Historic Roadways/Historic Trails/Stage roads
2	Schools
1	Municipal water system
190	

* Site 24PA1304 is not a quarry or even a source of toolstone. Should be removed as a cultural resource.

Table 3: Heritage Properties with Highest Priority Ranks: 2024 Reporting Cycle.

County Name	Site No	Status	Site Type or Name	Action Taken	Condition	Total Cost of Stewardship Efforts by DNRC (specific to historic preservation)	Priority Ranking
Big Horn	24BH1591	HP	Archaeological: lithic scatter	SB3 form completed by DNRC. Inspected in 2018 by DNRC staff.	Stable. Currently intact, but within a coal mine's proposed expansion area.	\$0.00	4
Big Horn	24BH2349	NR	Lee Homestead	SB3 form completed by DNRC. Inspected in 2020 by DNRC staff.	The homestead buildings are abandoned and are badly deteriorating as a result of neglect.	\$0.00	4
Flathead	24FH1583	HP	Vissotzky petroglyph site	SB3 form completed by DNRC. Site recordation is preliminary. Additional exploration and high-resolution mapping of glyphs is proposed for 2022. Volunteers are monitoring the site.	Stable, but threatened by increased automotive traffic, recreational activities, and railroad maintenance.	\$0.00	4
Hill	24HL0101	NR	Archaeological: Wahkpa Chu'gn buffalo kill	SB3 form completed by DNRC. The site has been an important element of northern plains bison hunting efforts since the 1960s. Volunteers are actively monitoring and maintaining the site. Some effort is being made by the H.Earl Clack Museum to offer scheduled public tours for the resource.	Currently stable. Funds to operate and maintain the site have been derived exclusively through grants and private donations, but these revenue streams are no longer being pursued. It is presently unknown if any one will continue operating and maintaining the site as a tourist attraction into the future. Maintenance work is currently conducted by unpaid volunteers.	\$0.00	4
Prairie	24PE0231	HP	Powder River Supply Depot	SB3 form completed by DNRC. Inspected in 2020 and 2021 by BLM and DNRC staff.	Abandoned, heavily disturbed by natural and cultural processes. Professionally excavated, researched, and documented.	\$0.00	4
Prairie	24PE0621	HP	Moore-Keltner Site	SB3 form completed by DNRC. Inspected in 1995, 2022 by DNRC staff. Fill from one eroding pit heard collected but not processed. C-14 date obtained on a single bison calcaneus.	Besant campsite (ca. 330 A.D.). Subject to ongoing erosion and data destruction.	\$775.00	2

HP = *Heritage Property, but not listed in the National Register of Historic Places*; NR = *Listed in the National Register of Historic Places*
